DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 25, and 29 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 25, and 29 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. As per the most recent interpretation of the Interim Guidelines regarding 35 U.S.C. 101, claims 25, and 29 define non-statutory processes because they merely manipulate an abstract idea without a claimed limitation to produce a useful, concrete, tangible result. Claims 25, and 29 reviewed in light of the specification, simply recite an abstract idea for linguistic analysis.

As can be seen by claims 25, and 29, these claims recite an abstract idea by setting forth the step of “initializing a Avoid Evaluation Of This Trigger (AEOTT) rating for a pre-requisite trigger; resolving the pre-requisite trigger based on a first data set; determining whether resolving the pre-requisite trigger caused an early exit; if resolving the pre-requisite trigger caused an early exit, decreasing the AEOTT rating; and if resolving the pre-requisite trigger did not cause an early exit, increasing the AEOTT rating”. These steps are abstract ideas.

Art Unit: 2626

Reviewing each claim as whole fails to show the transformation or reduction of subject matter to a different state of thing. Determining whether resolving the pre-requisite trigger caused an early exit; if resolving the pre-requisite trigger caused an early exit, is merely an abstract idea to encode a quantize signal, not a different state or thing.

If the acts of a claimed process manipulate only numbers, abstract concepts or ideas, or signals representing any of the foregoing, the acts are not being applied to appropriate subject matter (Benson, 409 U.S. at 71-72, 175, USPQ at 676).

Furthermore, claims define nonstatutory processes if they simply manipulate abstract ideas (Warmerdam, 33 F.3d at 1360,31 USPQ2d at 1759). As for guidance to areas of statutory subject matter, see 35 U.S.C. 101 Interim Guidelines (with emphasis of the Clarification of Interim Guidelines For Examination of Patent Applications for Subject Matter Eligibility); as an example, in Alappat, the claimed output smooth waveform (consisted of lighting pixels on an oscilloscope/display) is a useful, concrete, tangible, final result; in Arrhythmia, the claimed useful, concrete, tangible, final result represented the condition of a patient's heart; in State Street, the claimed useful, concrete, tangible, final result was data output that represented a final share price momentarily fixed for recording and reporting purposes and even accepted and relied upon by regulatory authorities and in subsequent trades.
